Profile

Motivated Computer Science student seeking an internship to gain hands-on experience in software development, Machine Learning, and Computer Vision. Proficient in Python, OpenCV, Pandas, NumPy, Matplotlib, and Scikit-learn, with basic knowledge of Deep Learning. Passionate about solving real-world problems, learning new technologies, and contributing effectively to practical projects.

Education

Narowal **Intermediate in Computer Science , Bachelor in Computer Science**
University of Narowal

Professional Experience

08/2025 – 10/2025
Narowal, Pakistan **Arch Tech Internship**
Worked on basic Machine Learning and Data Analysis tasks using Python.
Implemented data preprocessing and visualization using Pandas, NumPy, and Matplotlib.
Developed introductory Computer Vision tasks using OpenCV.
Gained hands-on exposure to Scikit-learn models and basic Deep Learning concepts.
Collaborated on small projects and improved problem-solving skills through practical assignments.

Projects

Final Year Project

Dental And Oral Detection System

Developed an AI-powered health-tech system using PHP Laravel, MySQL, and Deep Learning (Keras/TensorFlow) to detect multi-class oral diseases from images. It trains advanced image classification models for accurate diagnosis and maps full system workflows via precise ERDs and architectural flowcharts.

Academic Projects

Tree Diseases Detection

Tree Disease Prediction System:

Built a deep learning model using Keras to identify and predict tree diseases from leaf images. The system assists in early detection and supports better crop and forest management.

Kidney Stones Prediction System

Kidney Disease Prediction System:

Developed a machine learning model using Keras to predict kidney disease based on patient medical data. The system helps in early detection by analyzing key health parameters and improving diagnostic accuracy.

Heart Diseases Prediction System

Heart Disease Prediction System:

Developed a machine learning model using Keras to predict the risk of heart disease based on clinical and patient health data. The system supports early diagnosis and helps in better medical decision-making.

Diabetes and Breast cancer

Diabetes & Breast Cancer Prediction System:

Developed machine learning models using Keras to predict diabetes and breast cancer based on patient medical data. The system supports early detection and assists healthcare professionals in decision-making.

Realtime Face Mask Detection

Realtime Face Mask Detection:

Developed a real-time face mask detection system using computer vision and deep learning to identify whether a person is wearing a mask or not through live video feed, improving public safety monitoring.

Spam Email Classification using NLP

Built a model to detect Spam and Not Spam emails.

Used Python, Google Colab, NLP, and Naive Bayes.

Performed text cleaning and classification.

Skills

C++, Python

Programming Languages: Python

Machine Learning: Supervised & Unsupervised

Learning, Scikit-learn

Computer Vision: OpenCV (Image Processing,

Face/Object Detection – basic)

Data Analysis: Pandas, NumPy

Data Visualization: Matplotlib

Deep Learning: Basic concepts (CNNs – beginner level)

NLP(Natural language process)

Tools & Platforms: Jupyter Notebook, Google Colab

Soft Skills: Problem Solving, Analytical Thinking,

Willingness to Learn

Php and Laravel

Certificates

Online Arch Tech Internship

Certification – Arch Technologies:

Received a certificate of completion for successfully completing an online internship at Arch Technologies, with hands-on experience in Machine Learning and Deep Learning using Python and Keras.
